

Our Paper Planes

Our paper planes are the ideal way of passing the time. We offer revolutionary new developments of the traditional common paper planes. If your lesson, conference, or lecture turn out to be deadly boring, you can have a wonderful time with our planes.

All our models are folded from one paper sheet. They are exclusively folded without using any adhesive. Several models are equipped with a folded landing gear enabling a safe landing on the intended location provided that you have aimed well. Other models are able to fly loops or cover long distances. Let them start from a vista point in the mountains and see where they touch the ground.

Have a look at our new paper plane models!

Long Distance Glider

With this paper rocket you can send all your messages even when sitting in a hall or in the cinema pretty

near the back.

Giant Wing

An unbelievable sailplane! It is amazingly robust and can even do aerobatics. But it best suited to gliding.

Cone Head Rocket

This paper arrow can be thrown with big swing. We launched it from the roof of a hotel. It stayed in the air a long time and covered a considerable distance.

Super Dart

The super dart can fly giant loops with a radius of 4 or 5 meters and cover very long distances. Its heavy cone point is slightly bowed upwards to get the lift required for loops.

To fold the famous rocket looper proceed as follows:

Take an A4 sheet. Fold it lengthwise in the middle. Then, fold the upper corners down. Fold the long sides inwards that the points A and B meet on the central fold. Fold the points C and D that the upper corners meet with the central fold as well. Fold the plane in the middle. Fold the wings down that they close with the lower border of the plane.
